PROFESSIONAL SUMMARY

Software Architect and hands-on engineering leader with 9+ years designing, building, and scaling web, SaaS, and cross-platform products. I turn ambiguous business requirements into clean, resilient architectures — event-driven microservices, containerized deployments, and pragmatic monoliths where they fit. I have led and mentored multiple engineering teams as Principal Engineer and Engineering Manager, owning technical direction end to end: system design, cloud infrastructure, CI/CD, code quality, and delivery. Deep across the modern PHP/Laravel and JavaScript/TypeScript (Node.js, React.js, Electron.js) stacks, with a growing focus on AI-assisted product development.

CORE COMPETENCIES

Architecture: System & Solution Design, Microservices, Event-Driven Architecture, Domain-Driven Design, Repository Patterns, REST APIs, Scalability & High Availability

Backend: PHP / Laravel, Node.js, MySQL, RabbitMQ (message queues), Server-Side Rendering

Frontend: TypeScript, React.js, Redux, Electron.js (cross-platform desktop), Progressive & Reactive Web Apps, SEO/Isomorphic

Cloud & DevOps: AWS (ECS, ECR), Docker, CI/CD Pipelines, Automated Deployments, Cloud Infrastructure

AI Engineering: AI-Assisted Product Development, LLM Integration, AI-Driven Mobile App Delivery

Leadership: Engineering Management, Technical Direction, Team Leadership & Mentoring, Code Review, Hiring, Agile/SDLC, Technical Documentation

PROFESSIONAL EXPERIENCE

Trustshoot *trustshoot.com* — Feb 2024 – Present

Engineering Manager · *Node.js · React.js · Electron.js · Docker · AWS · CI/CD*

- Own end-to-end engineering for a cross-platform product spanning an Electron.js desktop client, React.js web app, and Node.js service layer — architecture, roadmap, and delivery.
- Lead and mentor the engineering team: technical direction, code review, hiring, and delivery cadence across a distributed, remote-first setup.
- Designed a modular service architecture and hardened the release pipeline with Dockerized builds and CI/CD for reliable, repeatable deployments.

Moon Group *cryptojobs.com · themoonshow.com* — Nov 2023 – Jul 2026

Software Architect (Part-time / Concurrent) · *Laravel · Node.js · React.js · RabbitMQ · AWS ECS/ECR · Docker*

- Defined the technical architecture for CryptoJobs (a Web3/crypto talent marketplace) and TheMoonShow (a media/streaming platform) from the ground up.
- Introduced event-driven communication with RabbitMQ and containerized services deployed on AWS ECS/ECR, improving scalability and decoupling.
- Set engineering standards — architecture reviews, coding conventions, and CI/CD — and guided the team through implementation.

Bayt.com *afterhire.com · evalufy.com* — Feb 2021 – Dec 2022

Principal Software Engineer (led 2 teams) · *Laravel · Node.js · React.js · Redux · MySQL · RabbitMQ · AWS*

- Led two engineering teams delivering HR-tech SaaS products for the Middle East's largest job site: AfterHire (employee onboarding), built in React with Redux, and Evalufy (video interviewing & candidate assessment).
- Owned architecture and technical direction across both products: API design, data modeling, asynchronous processing, and scalability for high-volume recruitment workloads.
- Drove engineering quality through architecture reviews, mentoring, and standardized CI/CD delivery, raising velocity and reliability across teams.

Powersoft19 *powersoft19.com* — 2018 – 2020

Full-Stack Engineer / Application Developer · *React.js · Redux · Node.js · PHP · Laravel · MySQL*

- Built safety-critical and enterprise web solutions for international clients, including the RailComm Yard Portal train-tracking system (real-time railcar tracking).
- Built the Yard Portal front end in React.js with Redux managing shared real-time state, backed by a Node.js API and service layer; also delivered features across the PHP / Laravel stack.

Larasoft *larasoft.io* **2017 – 2018**

Team Lead / Application Developer · *PHP · Laravel · React.js · MySQL · Stripe*

- Led architecture, database design, and backend development for multiple products (HomeKeyInn, ExOsecure, FanTazTech), including payment (Stripe/BlueSnap) and Active Directory integrations.

SELECTED PROJECTS & VENTURES

- **AI-Built Android Apps (Google Play):** Independently designed, built, and published Android applications to the Google Play Store using AI-assisted development workflows — from concept and architecture to release and store operations.
- **Freelance Software Architecture & Consulting:** Advised startups and teams on system design, cloud migration (Docker/AWS), and scaling strategies across the Laravel and Node.js/React.js ecosystems.

EDUCATION

Master of Information Technology — Virtual University of Pakistan ***(Gold Medalist)***

Bachelor of Commerce — University of the Punjab, Lahore
